...SPECIALIST IN PIPELINE SYSTEM SERVICE

YOUR PARTNER IN PIPELINE SERVICE

Since its foundation in 1992, FASTRA, s.r.o., has been providing services on all types of pipelines transporting various products (water, steam, gas, oil and its fractions, waste, etc.) at pressures up to 40 bar. Thanks to our innovative certified technologies, we are able to perform work without leakages and without interrupting the supply of the product. The technologies make it possible to work on pipeline systems even outside regularly planned shutdowns.

Services Performed

- ✓ Temporary and permanent closure of piping without product leakage
- ✓ Pipe drilling under pressure without product leakage
- ✓ Pipeline cutouts
- ✓ Bypasses and alternative supply
- ✓ Non standard service work

We can perform services even in demanding environments, such as power plants (including nuclear), chemical plants, refineries, heating plants, glassworks, etc.

Our specialists can evaluate the suitability and adequacy of technology available so that it brings you the maximum benefit with the minimum costs.

Production Programme

In addition to our standard production programme, we also supply custom made parts that solve seemingly unsolvable challenges during operation. They are primarily repair fittings, patches and other components.

Special Work

Closures of non-standard product pipelines, for example a closure of DN3350 blast furnace gas, Line Stopping in Temelín Nuclear Power Plant and Line Stopping of C4 fraction.

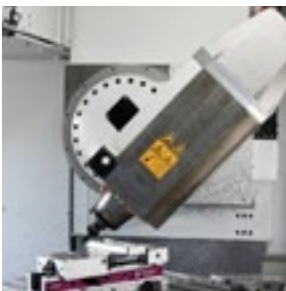

Modern CNC with 5 Axes at Your Service

Our company's production department has a modern vertical milling centre with 5 axes and a large workspace, thanks to which we can produce even large precision workpieces. The Siemens Sinumerik operating system, large magazine capacity, automatic tool changes and tool and workpiece predisposes the machine to the best results!

Key parameters:

- 5 axes and 5 workpiece surfaces
- workpieces with dimensions of up to 800 x 800 x 800 mm
- up to 18,000 rpm
- for all materials
- high precision
